Micchelli, C.A.; Pinkus, A.

Variational problems arising from balancing several error criteria.

Rend. Mat. Appl., VII. Ser. 14, No.1, 37-86 (1994).

The authors discuss a class of variational problems where two or more error criteria are to be controlled simultaneously in some optimal fashion. In particular, they point out some general properties of these problems and also present a survey of examples and possible applications. *A.Salvadori (Perugia)*
